

**Project Design Phase
Proposed Solution**

Date	23 June 2026
Team ID	
Project Name	Optimizing User, Group, and Role Management with Access Control and Workflows
Maximum Marks	2 Marks

Proposed Solution :

S.No.	Parameter	Description
1	Problem Statement (Problem to be solved)	Organizations face challenges in managing users, groups, roles, and permissions securely. Manual access management can lead to unauthorized access, inconsistent permissions, poor accountability, and inefficient task management.
2	Idea / Solution Description	Develop a ServiceNow-based Role-Based Access Control (RBAC) solution that manages users, groups, and roles with secure Access Control Lists (ACLs). The solution includes custom Project and Task tables, automated task assignment, status updates, and approval workflows using Flow Designer.
3	Novelty / Uniqueness	The solution combines RBAC, ACLs, workflow automation, and task governance in a single ServiceNow application. It provides secure role-based access, automated approvals, auditability, and streamlined project management through a low-code platform.
4	Social Impact / Customer Satisfaction	Improves data security, reduces manual effort, enhances accountability, and increases productivity. Project Managers gain better control over projects, while Team Members receive secure and efficient access to assigned tasks, resulting in higher user satisfaction.
5	Business Model (Revenue Model)	The solution can be deployed as a ServiceNow enterprise application for organizations on a subscription or implementation basis. Businesses can adopt it to strengthen governance, automate workflows, and improve operational efficiency.
6	Scalability of the Solution	The application is highly scalable and can support additional users, groups, roles, departments, projects, workflows, and approval processes without major architectural changes by leveraging the ServiceNow cloud platform.
